WorkBoat's 2010 Construction Survey

The number of newbuilds in *WorkBoat's* 2010 Construction Survey increased an impressive 18 percent over last year — jumping from 454 in 2009 to 535 in 2010.

Several categories posted significant increases in vessels built and delivered. Patrol Boats increased from 84 last year to 117 this year. Non-Self-Propelled Vessels more than doubled its total from 26 in 2009 to 53 in 2010. The Other Military category increased from 39 to 65. The most impressive move came from the Boom, Spill Response category, jumping from just three in 2009 to 35 in this year's survey. The increase in boom/spill-response boats can be directly attributable to the *Deepwater Horizon* disaster in the Gulf of Mexico last April.

The *Deepwater Horizon* well blow-out led to a moratorium on deepwater drilling permits. Many in the oil and gas industry in the Gulf blame the moratorium for slowing the construction of vessels that support the offshore industry.

However, the Supply Boats category only saw a slight decrease from 45 in 2009 to 38 in 2010, and the Crew, Crew/Supply, Personnel Launch category actually increased from seven to nine. It should be noted, however, that the majority of these contracts for OSVs, crewboats and other oil service vessels were in place before the April 20 disaster in the Gulf. It's been a tough year for some yards. **Aluminum Chambered Boats** ceased operations in November and an auction of the company's assets took place on Feb. 3, 2011.

WorkBoat's annual Construction Survey is compiled from questionnaires, boats covered in the magazine over the past 12 months, websites, newsletters, press releases, financial reports, and other sources. Several yards have only one boat listed. This doesn't mean the yards have no other vessels underway. For various reasons, some operators don't want to include their boats in the survey, and some shipyards request that contracts be excluded.

Several survey mainstays have no newbuild contracts at this time.
